PROFESSIONAL SUMMARY

Production Support and Operations Engineer with 8 years of experience at Accenture managing the stability of Java microservices across banking, e-commerce, and hospitality sectors. Track record in observability (Dynatrace, Splunk, AppDynamics, Sumo Logic), critical incident response (P1/P2), root cause analysis, and shifting teams from reactive monitoring to proactive, alert-driven operations.

CORE SKILLS

Operations & Incident Management: P1/P2 Incident Response, Production Availability, RCA (Root Cause Analysis), MTTR Reduction, SLA Governance, Change Management, On-Call Support

Observability & Monitoring: Dynatrace, Splunk, AppDynamics, Sumo Logic, Synthetic Monitoring, Threshold-Based Alerting, Custom Dashboards, APM, Log Analysis

Platforms & Infrastructure: AWS (Foundational), Java Microservices, SAP (Cron/Batch jobs)

Tools & Testing: ServiceNow, Jira, Postman, SOAP UI

Methodologies: Agile/Scrum, Cross-functional Coordination, Team Mentoring

PROFESSIONAL EXPERIENCE

Accenture May 2017 – June 2025

Custom Software Engineering, Senior Analyst (Truist – Investment Banking) Apr 2024 – Jun 2025

- Managed production stability and availability for Java-based Wealth & Trust microservices in a high-volume banking environment.
- Shifted the team from reactive to proactive monitoring by building Splunk dashboards that separated system errors from user errors and adding threshold-based alerts for server and database errors — so problems were caught and worked before they escalated into P1/P2 incidents.
- Led the incident lifecycle in ServiceNow; triaged P1/P2 incidents, coordinated with dev/ops teams for resolution, and drove post-mortem reviews to reduce MTTR.
- Conducted structured root cause analysis on recurring application failures and coordinated permanent fixes, reducing repeat incidents.
- Managed release planning and deployment execution across QA, Dev, and Ops, with no unplanned downtime during production changes.

Custom Software Engineering, Senior Analyst (Chanel – E-Commerce) May 2023 – Mar 2024

- Replaced the team's hourly manual webpage checks with Dynatrace synthetic monitoring that simulated user journeys at set intervals, cutting routine monitoring effort from ~15 minutes per hour to under 5 and catching outages without a human watching the screen.
- Oversaw production monitoring across multiple global regions to support the rollout of e-commerce platforms into new markets.
- Trained and mentored junior team members on Dynatrace monitoring, log analysis, and incident triage best practices.
- Monitored and troubleshooted global scheduled batch jobs (crons) via SAP to ensure uninterrupted business processing across time zones.

Technical Operations Analyst – CIAM (Marriott – Hospitality) Aug 2021 – May 2023

- Verified and validated the migration of the observability stack from AppDynamics and Sumo Logic to Dynatrace and Splunk, testing within the system to confirm monitoring coverage held through the transition, and ramped the team up on the new tools afterward.
- Coordinated endpoint migrations to securely manage customer identities, user registration, and application access.
- Served as the technical point of contact for onboarding new partner integrations with Marriott.com.
- Provided real-time support and technical verification alongside development teams during critical deployment windows.

Technical Operations Analyst – Profile Services (Marriott – Hospitality)

Jun 2017 – Jul 2021

- Supported data migration and system integration efforts across legacy platforms during the Marriott, Starwood, and Ritz-Carlton systems merger.
- Transitioned the team from manual status-checking to alert-driven monitoring by redesigning core operational workflows and building dashboards to catch system degradation early during high-traffic release windows.
- On boarded and trained new resources on application architecture, internal support processes, and monitoring tools.

CERTIFICATIONS

- Professional Scrum Master I (PSM I) – Scrum.org, 2026
- In Progress: AWS Certified Cloud Practitioner & ITIL 4 Foundation

EDUCATION

- B.Tech, Information Technology - Sri Krishna College of Engineering & Technology, Anna University, 2017
